

YOPRO DELICE TUNISIA

Interactive Brand Games

Full Game Design Document

Design Project — Final Deliverable

Product Overview

YoPRO Delice is a high-protein drinkable yogurt brand, part of the Danone group, officially introduced to the Tunisian market. Each bottle delivers 24g of protein with 0% fat, 0% added sugars, and 0% lactose — making it the go-to recovery and muscle-building drink for athletes and health-conscious consumers across Tunisia.

The product line comes in five distinct flavors, each with a bold dark-packaging identity:

Flavor	Color Identity	Visual Elements	Brand Feeling
Café Caramel	Dark brown / amber gold	Coffee beans, caramel cubes	Energy & focus
Chocolat	Deep brown / gold splash	Chocolate chunks, milk splash	Indulgence & power
Nature	Matte black / electric blue	Milk splash	Purity & simplicity
Fraise Framboise	Black / bold red-pink	Strawberry, raspberry fruits	Freshness & vitality
Vanille Biscuit	Dark gold / warm beige	Vanilla flower, biscuit	Comfort & sweetness

Brand DNA: Power. Performance. Purity. YoPRO Delice is designed for people who demand more from their nutrition — and their lifestyle.

The two games described in this document were designed as interactive brand experiences that translate YoPRO's core values into gameplay. Each game mechanic is intentionally linked to the brand's messaging: protein = power, consistency = results, and smart choices = a better body.

GAME 1 / Endless Runner

Protein Rush

1.1 — Game Concept

Protein Rush is a fast-paced, endless side-scrolling runner where the player controls a Tunisian athlete sprinting through an urban fitness environment. The athlete never stops running — the world moves past them at increasing speed, and it is the player's job to keep the character alive, fueled, and moving forward.

The central tension of the game is your Protein Bar — a meter that constantly drains over time, representing how your muscles deplete glycogen and protein during intense exercise. The only way to replenish it is to collect YoPRO Delice bottles that appear along the track. Hit junk food obstacles and you lose protein. Hit zero and the run is over.

"Protein Rush directly simulates the YoPRO Delice value proposition: your body needs constant protein fuel to keep performing. The bottle is not just a collectible — it IS the game."

1.2 — Brand Connection

Every design decision in Protein Rush reinforces YoPRO Delice's identity:

- **The 24g mechanic:** Every bottle collected adds exactly 24g of protein to your bar — mirroring the real nutritional content of a YoPRO Delice bottle.
- **Five flavors in-game:** Bottles appear in all five flavor variants (Café Caramel, Chocolat, Nature, Fraise Framboise, Vanille Biscuit), each with the correct color identity from the packaging design.
- **Junk food as the enemy:** Burgers, fries, pizza, and sugary drinks are the obstacles. This communicates the YoPRO message: choose protein, not junk.
- **Speed as reward:** The more you collect bottles and score points, the faster the game becomes — symbolizing how proper nutrition enhances athletic performance.
- **The protein bar drain:** Even at rest, your protein depletes — reinforcing the real science that athletes need consistent protein intake throughout the day.

1.3 — Gameplay Mechanics

Core loop	Run indefinitely, collect YoPRO bottles, dodge junk food. Game ends when protein bar reaches 0%.
Jump	Press Space, Arrow Up, or tap the screen. Can be used twice in the air (double jump).
Protein bar	Starts at 60%. Drains slowly over time. Each bottle adds +24g. Each junk food hit removes -22g.
Speed scaling	Game speed increases as score rises, creating escalating difficulty naturally.
Scoring	Points are awarded every frame of survival. No caps — the game is an endless high-score chase.
Flavor variety	All 5 YoPRO flavors appear as collectibles, each rendered with its authentic brand colors.

Double jump	Allows the player to reach bottles at different heights and avoid tall obstacles.
Flash immunity	After taking damage, the player has a brief invincibility window (30 frames) to prevent instant death.
Personal best	Score is tracked across sessions. A "New Personal Best" message is shown on the game over screen.

1.4 — Visual Design Language

The visual aesthetic of Protein Rush is directly inspired by the YoPRO Delice packaging: dark, premium, athletic, and bold.

- **Background:** Deep dark green (#0D1B14) night sky with animated star field — mirroring the dark bottle backgrounds.
- **Ground:** YoPRO brand green (#1D9E75) track with lane dashes, representing a professional athletic track.
- **Athlete:** Wears a YoPRO-green jersey with the brand name printed on it.
- **Bottles:** Rendered as miniature dark YoPRO bottles with flavor-specific color bands (gold for Café Caramel, red-pink for Fraise, etc.).
- **Particles:** Green particle burst when collecting a bottle; red burst when taking damage.
- **Speed lines:** Appear at high speeds, reinforcing the feeling of athletic momentum.
- **Typography:** Bebas Neue display font for all headers — an athletic, condensed typeface matching the brand's bold identity.

1.5 — Progression & Replayability

Protein Rush is designed around the "just one more run" loop common in the best endless runners. The difficulty curve is smooth — early game is forgiving and teaches players the mechanics, while late game becomes a genuinely intense reflex challenge.

- Score milestones trigger visual feedback ("PROTEIN STREAK!") at every 100 points, giving players a sense of achievement.
- Speed scaling means no two runs feel identical — each session pushes the player further.
- The personal best system creates a personal competition loop: players always want to beat their own record.
- Double jump adds a skill ceiling — mastering height control to collect bottles without hitting obstacles separates good players from great ones.

1.6 — Target Audience

Protein Rush targets the same demographic as YoPRO Delice itself: active young Tunisians aged 18–35 who are interested in fitness, sport, and performance nutrition. The game's accessibility (one-button control), short session length (2–5 minutes), and mobile-friendly design make it ideal for sharing on social media and playing between gym sets.

Muscle Builder

2.1 — Game Concept

Muscle Builder is an idle clicker game in which the player acts as the coach and nutritionist of a Tunisian athlete on their journey from beginner to elite champion. The player taps the athlete to simulate a workout shake, earning Protein Points with each click. These points are then spent on upgrades — better training routines, nutritional plans, recovery tools, and of course, more YoPRO Delice flavors — that increase the passive and active protein income.

As the athlete levels up through 10 distinct tiers (from "Beginner Athlete" to "YoPRO Legend"), their visual appearance evolves — they grow more muscular, their outfit upgrades, and the environment behind them becomes more prestigious. The game rewards both short, active play sessions and long passive accumulation, making it engaging for all types of players.

"Muscle Builder transforms the YoPRO Delice nutrition philosophy into a progression system. Every upgrade is a real-world athletic decision: better recovery, more consistent protein intake, smarter training. The bottle is the engine of progress."

2.2 — Brand Connection

Muscle Builder is the deepest brand integration of the two games. Almost every system in the game maps directly to a YoPRO Delice product benefit:

- **Protein Points currency:** The game's economy is built on protein — the core nutritional promise of YoPRO Delice.
- **Five flavor upgrades:** Each YoPRO Delice flavor is a purchasable upgrade with its own per-second protein income, encouraging players to "collect" all five flavors.
- **0% fat / 0% sugar messaging:** Upgrade descriptions use the product's real nutritional claims as flavor text, subtly reinforcing brand messaging.
- **24g protein per shake:** The base click adds protein incrementally, with upgrades multiplying this — just as adding YoPRO to your daily routine compounds results over time.
- **Construction musculaire / Récupération:** The two benefit claims from the real packaging appear as upgrade categories in the game.
- **Prestige system:** Resetting progress for a multiplier mirrors the real athlete concept of periodization — reset, rebuild, come back stronger.

2.3 — Gameplay Mechanics

Core loop	Click athlete to earn Protein Points. Spend points on upgrades to increase passive income. Level up the athlete to unlock new tiers.
Click value	Base: 1 protein point per click. Scales with upgrades — can reach 100+ per click at high levels.
Passive income	Upgrades generate protein points per second automatically, even when not actively clicking.

Flavor upgrades	Five YoPRO flavors available as upgrades, each increasing per-second income. Stack all five for maximum gains.
Training upgrades	Morning Run, Gym Session, HIIT Workout — each multiplies click power.
Recovery upgrades	Sleep Optimization, Stretching Routine — increase passive income multipliers.
Level system	10 athlete levels from Beginner to YoPRO Legend. Each level requires exponentially more protein points.
Prestige	At max level, reset all progress for a permanent $\times 1.5$ multiplier. Encourages long-term engagement.
Milestones	Achievement badges unlock at key thresholds (First 100g, All Flavors Collected, etc.).
Flavor selector	Player can switch which YoPRO flavor the athlete is drinking, changing the visual theme of the interface.

2.4 — Upgrade Tree

The upgrade system is organized into three categories, each representing a pillar of the YoPRO athlete lifestyle:

Category A — Training (Click Power)

- Morning Run — +2 protein per click — "Start your day like a champion"
- Gym Session — $\times 2$ click power — "Heavy lifting needs heavy protein"
- HIIT Workout — $\times 5$ click power — "Intensity demands recovery"

Category B — Nutrition / Flavors (Passive Income)

- YoPRO Nature — +1 protein/sec — "Pure. Clean. Powerful."
- YoPRO Chocolat — +3 protein/sec — "Indulge the right way"
- YoPRO Fraise Framboise — +8 protein/sec — "Fresh fuel, real results"
- YoPRO Café Caramel — +15 protein/sec — "The energy of espresso, the power of protein"
- YoPRO Vanille Biscuit — +25 protein/sec — "Sweet. Satisfying. Smart."

Category C — Recovery (Multipliers)

- Sleep Optimization — $\times 1.5$ all income — "Muscles grow while you sleep"
- Protein Timing — $\times 2$ all income — "Take your YoPRO within 30 minutes of training"

2.5 — Athlete Level Progression

Level 1	Beginner Athlete — Starting point. Basic gym clothes.
Level 2	Amateur Runner — First milestone. Running shoes unlocked.
Level 3	Fitness Enthusiast — YoPRO bottle appears in hand.
Level 4	Gym Regular — Athlete visually more defined.

Level 5	Dedicated Trainer — Professional gym environment.
Level 6	Semi-Pro Athlete — Team jersey unlocked.
Level 7	Competitive Athlete — Competition arena background.
Level 8	Elite Performer — Full YoPRO brand sponsorship gear.
Level 9	Champion — Medal and podium visual.
Level 10	YoPRO Legend — Maximum level. Gold YoPRO bottle. Hall of fame.

2.6 — Visual Design Language

Muscle Builder's interface is inspired by the premium, dark aesthetic of the YoPRO Delice packaging design. The UI is dark, minimal, and data-driven — like a professional athlete's performance dashboard.

- **Color palette:** Dark black base (#0A0A0A), YoPRO green (#1D9E75) for primary actions, amber gold (#EF9F27) for prestige/premium elements.
- **Typography:** Bebas Neue for stats and headings — condensed, powerful, athletic. DM Sans for body text — clean and readable.
- **Flavor theming:** The entire interface accent color shifts when the player selects a different flavor — caramel gold for Café Caramel, pink for Fraise, etc.
- **Athlete canvas:** The athlete is drawn procedurally on an HTML5 canvas, visually evolving with each level.
- **Float text:** Clicking produces floating "+Xg protein" text that rises and fades — satisfying visual feedback on every interaction.
- **Upgrade states:** Upgrades visually change state (locked → available → owned) with clear color coding so the player always knows what to aim for next.

2.7 — Target Audience

Muscle Builder targets a slightly broader audience than Protein Rush. Its relaxed, tap-and-wait mechanics make it suitable for both hardcore fitness enthusiasts who will obsess over optimal upgrade paths, and casual players who enjoy watching numbers grow. The prestige system and long-term progression create months of engagement potential, making it ideal as a companion app or social media campaign tool.

3 — Shared Design Philosophy

Both games were designed around a single unified brief: make the product the hero, not just the theme. In most branded games, the product is a logo in the corner. In Protein Rush and Muscle Builder, the YoPRO Delice bottle is the central mechanic — the thing you need, chase, and depend on to survive and progress.

- The 24g protein figure is not just marketing copy — it is a game number, a design constraint, a collectible value.
- The five flavors are not just color choices — they are five distinct collectibles, each with their own visual identity and upgrade slot.
- The 0% fat / 0% sugar / 0% lactose claims are not footnotes — they appear as contextual copy in upgrade descriptions.

- The "Construction Musculaire / Récupération" benefit claims are upgrade category names in Muscle Builder.

This level of product integration ensures that every second of gameplay is a brand touchpoint — players are not just playing a game, they are experiencing the YoPRO Delice philosophy in interactive form.

Both games are built as single HTML files — no installation required. They run in any modern browser on desktop or mobile, making them instantly shareable via link, QR code, or social media.

4 — Technical Implementation

Both games are built using vanilla HTML5, CSS3, and JavaScript — no external game engines or frameworks. This was a deliberate choice to keep file sizes minimal, load times instant, and deployment as simple as sharing a single .html file.

4.1 — Protein Rush Technical Stack

- **Rendering:** HTML5 Canvas API with requestAnimationFrame for smooth 60fps gameplay.
- **Physics:** Custom gravity and jump force system with double-jump logic and ground collision detection.
- **Collision:** AABB (Axis-Aligned Bounding Box) collision with a shrink factor for forgiving hit detection.
- **Procedural generation:** Bottles and obstacles spawn at randomized intervals that tighten as score increases.
- **Particle system:** Custom lightweight particle engine for collect and damage visual feedback.
- **Input:** Keyboard (Space / Arrow Up) and touch (tap) input for cross-device compatibility.

4.2 — Muscle Builder Technical Stack

- **Rendering:** HTML5 Canvas for the athlete character, standard DOM for UI elements.
- **Game loop:** setInterval-based tick system for passive income accumulation.
- **State management:** Pure JavaScript object state with computed derived values for upgrade costs and multipliers.
- **Persistence:** localStorage saves game state between browser sessions.
- **Responsive layout:** CSS Grid with fluid columns — playable on both desktop and mobile.

5 — Conclusion

Protein Rush and Muscle Builder are two complementary brand experiences that together cover the full spectrum of gaming engagement — from the instant adrenaline of an endless runner to the long-term satisfaction of a progression idle game.

Together, they communicate everything YoPRO Delice stands for: energy, performance, consistency, smart nutrition, and the rewards of hard work. They are not just games — they are an interactive extension of the brand identity designed in this project.

YoPRO Delice Tunisia

24g Protein · 0% Fat · 0% Added Sugar · 0% Lactose
